

RESIN

Material & Care

MATERIAL

- 100% branded polypropylene for all plastic furniture.
- Single-grade, highly impact-resistant, dyed through, mineral-reinforced, with UV stabilisers and antistatic additives.
- Only high-quality plastics, some of which are glass fibre reinforced, are used for connecting parts and protective caps for furniture and tables.
- All plastics used fulfil the requirements of the European REACH regulation.
- All materials are 100% recyclable.

PROPERTIES

- Ideally suited for outdoor use.
- Weather-resistant and durable.
- Low maintenance and easy to clean.
- Lightweight yet stable.
- High UV stability. Colour fastness of the surface tested for 3 years in Central Europe.

CARE

We recommend:

- Remove any dirt from the surface immediately to avoid staining or damage to the surface.
- Remove light soiling with a soft cloth or sponge, a soft brush, lukewarm water and a pH-neutral cleaning agent or mild soapy water.
- Simply rinse off any cleaning residue with clear water and rub dry with a cloth.
- Soften stubborn or dried-on dirt with a light, lukewarm soapy solution and wipe off carefully.
- To avoid staining, do not clean the furniture in direct sunlight. The surface temperature should not exceed 25°C during cleaning.
- It is also possible to use special cleaning and care products for plastic. Please follow the manufacturer's care instructions.

Never use for cleaning:

- Cleaners containing chlorine, acids or solvents.
- Scratching or abrasive agents.
- Hard brushes or steel wool.
- Products with aggressive chemical additives.
- Strongly acidic or alkaline solvents.
- High-pressure cleaners.

These can damage the surface.

STORAGE

- Even though SIEGER furniture is resistant to the effects of the weather, winter storage indoors or in dry, sheltered areas keeps the furniture looking good for longer and at the same time protects it from soiling.

RESIN

Material & Care

We recommend:

- Store in a dry place.
- Store frost-free, but not overheated.
- Protect from UV radiation during the winter.
- Avoid large temperature fluctuations.
- Ensure good ventilation.
- If winter storage indoors or in a dry, sheltered place is not possible, we recommend protecting the furniture with commercially available covers. To allow air to circulate and prevent waterlogging or condensation, these should not rest on the ground or on the product. Plastic wedges or similar spacers are suitable for this purpose. Alternatively, remove the protective covers regularly for short periods. Water should be able to run off easily and not remain on the protective cover. Always remove snow from the cover. Failure to do so can lead to mould or mildew stains on the furniture.
